Changelog: v1.01-2003-09-20 - fixed a few little bugs. v1.00 - initial release.

***** Version History: 03-11-2004 - Paul: Started coding this. 04-19-2003 - Paul: Started coding this. v1.01 - 03-09-2003 - Paul - Fixed login box link and changed to new exe structure. Fixed bug in default password. Fixed configuration file bug. Fixed admin mode. v1.00 - 03-09-2003 - Paul - Initial release. Saturday, March 14, 2004 One of the best pieces of advice I was given while learning programming in the 1980s was to use OpenOffice. It's free, cross platform, and extremely powerful. Even if you don't use it (if you don't have OpenOffice installed on your machine) you can still download the component.zip files and try them out. They're excellent. This program was partially made possible by the never ending commitment of a very generous friend of mine. It wasn't entirely his idea, though. I first wanted to release this as a shareware application as I did with the VcGen tool that lets you generate Visual Basic.NET statements. However, that sounded like it might not be the best business model to go with. And so, I decided to go with OpenOffice.org. I suspect the VcGen guys wanted to avoid my 'guess the few right numbers' logic (based on the market shares of Visual Basic.NET, vb 6, the IDE, IIS etc) as much as possible, so by using OpenOffice.org I could go ahead with my plan to release this as a shareware application. It's pretty easy to use. You just click on "OpenOffice.org" on the menu and then select "Write a new document" or "Start a new Spreadsheet". This will open a blank document. You then just click on each of the buttons that show up on the ribbon at the top of the screen. When you finish, the program will close.

What's New in the?

----- USAGE: C:\> DefaultUser [/c] [/f] [/d] [/p] [/n] [/m] /c Specifies the code that will be written to a new file. /f Specifies whether the password should be written to the default.ini file. /d Specifies the path to the default.ini file. /p Specifies the password to be written to the default.ini file. /n Specifies the default username. If this is not supplied, the user name of the local system is used. /m Specifies the domain of the default. If this is not supplied, the domain of the local system is used.

----- DefaultUser Options: -----
----- -c Specifies the code that will be written to a new file. -f Specifies whether the password should be written to the default.ini file. -d Specifies the path to the default.ini file. -p Specifies the password to be written to the default.ini file. -n Specifies the default username. If this is not supplied, the user name of the local system is used. -m Specifies the domain of the default. If this is not supplied, the domain of the local system is used.

----- DefaultUser Examples:
----- DefaultUser -c 02792 This sets the password of the default user to 2792 DefaultUser -c 02792 -f This will update the default.ini to change the default user to 2792 DefaultUser -c 02792 -p This will update the default.ini to change the password of the default user to 2792 DefaultUser -c 02792 -p dmlexample This will update the default.ini to change the password of the default user to 2792. This will also change the default user to dmlexample DefaultUser -c 02792 -p dmlexample -n exampleuser This will update the default.ini to change the password of the default user to 2792. This will also change the default user to exampleuser DefaultUser -c 02792 -p dmlexample -

System Requirements For DefaultUser:

• Windows XP/Vista/7/8/8.1/10, 64 bit • 1.8 GHz processor • 512 MB RAM • 200 MB free HDD space • 300 MB free space • DirectX 9 graphics card • Running in full screen mode The game is not compatible with DirectX 11 graphics cards. Installer: The installer can be downloaded from the Nexus Market. Lag? • If you experience any lag, it may be caused
